

wheel and axle: experiment 2

Build a cart using 4 wheels and 2 axles to carry:

0.5kg, 1kg, and 1.5kg. Push the cart from point **a** to point **b** and measure the  distance the cart travels with each weight.

observation

measure the  distance for each  used:

		 distance
1.	0.5 kg	
2.	1kg	
3.	1.5kg	

which cart travels the most  distance:
