

levers: experiment 1

Compare the effort needed to lift  (1kg, 1.5kg, 2kg)

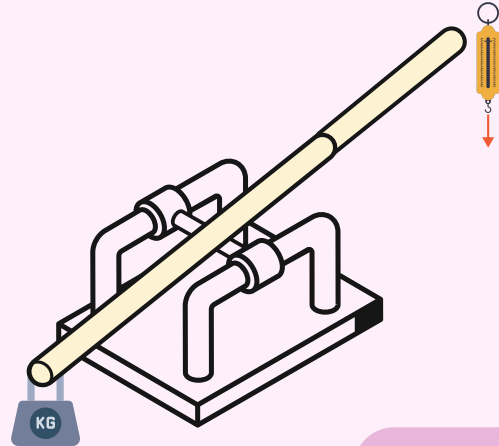

- Setup A : Lift them directly using a spring scale
- Setup B :Lifting them with a lever with medium length and fulcrum at the centre.

1.

setup A

2.

setup B

observation

measure the effort for each  used:

		 effort setup A	 effort setup B
1.	1kg		
2.	1.5kg		
3.	2kg		
which setup uses the least  effort:			

result

note the difference in both the setups -
