

# wheel and axle: experiment 4

Build 2 carts and add 1.5kg to each cart:

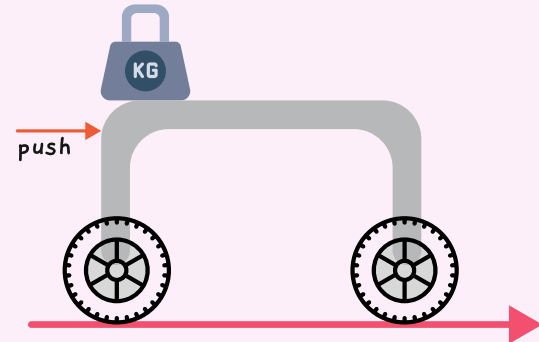

1. load centered
2. load at the back

Push both the carts and observe if the 1.5kg placement affects the distance for each cart.

setup 1

setup 2

# observation

measure the  distance for each:

|                                                                                                                         |  distance |
